

# 5 Qualities of a UX Designer

*Do Any of These Sound Like You?*

## Curiosity

*First and foremost, UX design is about enhancing someone's experience.*

To be able to progress any platform, UX designers must constantly be asking questions and seeking answers.

## Empathy

*To make a user experience universally sound, its design must be inclusive of all people, customs and perspectives.*

Those with the ability to see the world with another's point of view in mind will give themselves a better opportunity to succeed in UXD.

## Innovation

*Calling all dreamers: UX design requires abstract thinking.*

It demands ideas to be pushed to the edges of what's possible, with the understanding that, oftentimes, the best ideas are the ones that seem ridiculous at first.

## Resilience

*Try, try and then try again.*

UX design requires the ability to identify a problem and then go seek its solution(s), oftentimes with little information to work with. Your problem-solving now will lead to the user's ease later.

## Communication

*UX design is an extremely collaborative field.*

The better you are at communicating your thoughts and ideas with others, the better equipped you'll be to add to the end design.
